Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Election/Restrictions

Applicant's election without traverse of species 2 (Figs. 3, 4A, 4B) with claims 1, 4 and 6-9 readable upon the elected species in the reply filed on 01/17/2006 is acknowledged.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Sano et al. (US 5,952,714).

Sano et al. disclose a solid-state imaging device (Fig. 8), comprising: a base (50a) made of an insulation material and having a frame form in planar shape with an aperture (51) formed at an inner region; a plurality of wirings (54, 55) provided on one surface of the base and extending toward an outer periphery of the base from a region along the aperture; and an imaging element (27) mounted on the surface of the base (50a) with the plurality of wirings provided thereon so that a light-receptive region of the imaging element faces the aperture, wherein an end portion on the aperture side of each of the plurality of wirings forms an internal terminal portion (54) and an end portion on the outer peripheral side of each of the plurality of wirings forms an external terminal portion (55), the internal terminal portion of the wiring being connected electrically with

an electrode (28) of the imaging element, wherein the plurality of wirings are made of thin metal plate leads, the base is made up of a resin molded member in which the thin metal plate leads are embedded, and at least a part (54) of a side edge face of the thin metal plate leads is embedded in the base (50a).

Allowable Subject Matter

Claims 4 and 6-9 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Reference A is being cited since it shows flip chip image sensor packages.
